

KORO® BY IMANTS KORO® FTM™

The KORO® FTM 2.0 and 2.5 are heavy-duty fraze mowers, for removing unwanted surface matter such as poa-annua including seed bank, thatch, other weed seed bank management, or the entire surface. The side arm conveyor removes debris directly into a trailer, or truck leaving a more level even surface. The FTM is designed for sports turf applications i.e. football & rugby pitches, local government sports turf, turf farms, etc. The redesigned optional rotors allow the Koro FTM to be used for a variety of surface renovations, including scarifying by multiple percentages 15% incremental through 100%, surface removal and the cleaning out of organic matter from semi synthetic fiber-reinforced pitches as specified, or standard turf renovations, including full turf removal. The elevator folds flat for transport with the optional extra of a mid-mounted roller.

SPECIFICATIONS

Working width	2.00m
Working depth	0 - 50mm
Weight	1355kgs (depending on rotor fitted)
Speed requirement	Creep speed or hydrostatic drive required
Tractor requirement	540 pto. 30ltr/min hydraulic flow. 2 x double acting spool (4 plug points)
Operating speed	0 - 4 kph depending on the rotor
Optional Accessories	Mid mounted roller
