

Speedresser 24H

The Raycam Speedresser 24H is a 2.4m wide drop-spreader designed to handle all top dressing material. The 4 flotation tyres minimise the risk of turf damage & compaction. Ideal for use on golf courses and sports fields with private clubs, local authorities and contractors. The Speedresser 24H requires a tractor of at least 75HP and is PTO driven via a heavy-duty transmission to an agitator and twin rollers. The twin rollers are hydraulically adjustable against a pre-set stop to alter spreading rate applications. The high work rate enables the spreading of top dressings up to depths of 2mm - 75mm in one pass.

SPECIFICATIONS

| | |
|---------------------|---|
| Spreading width | 2.40m |
| Overall width | 2.65m |
| Body Length | 2.30m |
| Hopper Capacity | 5.75m ³ |
| Loading height | 2.00m |
