Recycling Dresser MKII Warm & Cool season golf and sport turf model.

The Recycling Dresser aerates the underlying soil vertically and horizontally, removing soil from the root zone and re-distributing it across the playing surface. Layering and compaction are eliminated, biological activity increased and existing fertilisers/nutrients in the soil are better utilised. The Recycling Dresser reduces the amount of new top-dressing required, therefore saving labor and material costs promoting sustainable maintenance. 3 different working widths are available in the range, 1.6m, 1.9m and 2.2m.

SPECIFICATIONS

	1600 MK II	1900 MK II	2200 MK II
Working width	1.60m	1.90m	2.20m
Working depth	10 - 17cms
